AgriSys ERP

Specially developed for the agricultural sector

AgriSys ERP

Business is more than internal operations: to be successful, one needs to efficiently manage purchases of goods, services, and raw materials; foster and control relationships with suppliers and business partners; and create, manage, and retain customer base. All these relationships are more efficiently and economically managed with business-wide applications.

Globalization is exposing agriculture community to fierce competition. Adopting professional management practices is need of an hour and use of Information technology tools, software, Internet etc. has become unavoidable to sustain growth.

The humble seed is now big business and is attracting the attention of corporate like never before. Private sector seed producers are experiencing more than expected growth every year. The so called small players have grown in size, are more organized and have structured systems & processes in place with the help of information technology.

Building on the success and experience gathered working with one of our client, our team worked on ways to create a business solution for seed producers, which would streamline, integrate and standardize the processes. The result was Agrisys ERP; which has transformed the way our clients manage their business.

Product Features:
